

ANTIMICROBIAL PROTECTION

PARTIAL LIST OF MICROORGANISMS WITH KNOWN SENSITIVITY TO MICROBAN “B”

Gram-Positive Bacteria	Gram Negative Bacteria	Fungi and Yeast:
Actinobacillus israelii	Brucella abortus	Aspergillus fumigatus
Actinomyces bovis	Enterobacter cloacae	Blastomyces dermatitidis
Clostridium tetani	Escherichia coli	Candida pulcherrima
Lactobacillus sp.	Klebsiella sp.	Candida tropicalis
Listeria monocytogenes	Moraxella lacunata	Epidermophyton floccosum
Micrococcus spp.	Pasteurella multocida	Microsporum cookei
Mycobacterium srnegmatis	Proteus mirabilis	Penicillium egyptiacum
Staph. aureus	Pseudomonas aeruginosa	Streptomyces sp.
Staph. lactis	Salmonella typhi	Trichophyton mentagrophytes
Streptococcus faecalis	Salmonella spp.	Trichophyton schoenleinii
Streptococcus haemolyt. A	Shigella dysenteriae	Trichosporon cutaneum
Streptococcus pneumoniae	Vibrio cholerae	Trichomonas foetus

Advanced Microbial Control

- Microban “B” is not a Biocide and will not contaminate waste water systems and downstream airflows.
- Registered with the EPA and has been proven safe and benign to humans and animals.
- Microban agents work within the polymer matrix and control microorganisms for the life of the flooring system.
- Microban protects and defends the surface around the clock, even between cleanings.
- Registered with the FDA as required for medical end use products.
